1. input x output = MAC

784 x 256 = 200704

256 x 128 = 32768

128 x 10 = 1280

2. forward Pass

200704 + 32768 + 1280 = 234752 total MAC

3. Total trainable parameters

200704 + 32768 + 1280 = 234752

4.

234752 x 4 bytes = 939008 weight

(5) $784 + 256 + 128 + 10 = 1178$ Layersize $\times 4 = 4712$

(6)

$$\frac{2 \times 234752}{939008 + 4712} = 0.4975$$
